#### HISTORY:

Testing

EXAM: CT CHEST WITH IV CONTRAST

#### COMPARISON:

No priors are available at this time.

#### TECHNIQUE:

CT of the chest with the administration of mL of OMNIPAQUE 300 intravenously.

Using automated exposure control and adjustment of the mA and/or kV according to patient size, radiation dose was kept as low as reasonably achievable to obtain optimal diagnostic quality images. DICOM format image data is available electronically for review and comparison.

#### FINDINGS:

THYROID: No significant thyroid abnormality is identified.

MEDIASTINUM: Heart size is normal with no pericardial effusion. No bulky mediastinal or hilar adenopathy is appreciated.

AORTA: Nonaneurysmal with no significant atherosclerotic calcifications.

LUNGS: Lungs are free of significant infiltrate, effusion, or pneumothorax. No pulmonary nodules are present.

BONES/CHEST WALL: No acute bony abnormality is appreciated. The chest wall soft tissues are negative. No axillary adenopathy.

UPPER ABDOMEN: The visualized structures of the upper abdomen are negative.

#### IMPRESSION:
